HSE Golden Rules and PIENSA®

Ten rules every Grupo HL worker knows and applies, and the method used to teach them.

01 Plan
All work must be planned, with the right equipment and tools, identifying HSE hazards and defining their controls.

02 Zero alcohol and drugs
Tolerance for alcohol and psychoactive drugs is zero: under no circumstances does anyone work under their influence.

03 Competence
Every worker must be trained in the tasks they perform and competent in the work assigned.

04 Lockout/tagout
Any work with exposure to hazardous energy follows the lockout/tagout (LO-TO) protocol.

05 High risk with a permit
High-risk tasks are carried out under safe work procedures, with prior authorization from the area supervisor.

06 Certified operators
Use of vehicles and heavy equipment is limited to certified and authorized personnel.

07 Report
Every employee must report any unsafe conditions and behaviors they identify.

08 Housekeeping
Every activity is carried out in clean and orderly conditions.

09 Personal protection
Using the personal protective equipment suited to each task is mandatory to perform it.

10 Emergencies
Everyone must know the emergency protocol before starting any work.

PIENSA®

A knowledge-transfer methodology that puts people at the center to foster the internalization of good occupational safety practices and cultural change. It seeks to humanize learning so every worker performs with quality, safety and effectiveness. It is led by the HSE staff.

Planning	Topic	Tool
Always start by planning.	Define the topic to address.	Select the most suitable tool.

Safety culture practices

EACH PROJECT TEAM

Behavior observers

Behaviors are planned, observed, addressed and recorded, with constant feedback to the people observed and to the whole organization.

FORMERLY: REPORT AND CONTRIBUTE

Stop and secure

Direct-hire workers report the unsafe conditions they identify, with incentives and a monthly award for the top reporter.

ALL WORKERS

Safety passports

Every worker receives a safety passport, which sets out the penalties for breaking the rules under the internal regulations.

PRESIDENCY AND HSE DEPARTMENT

Leadership meetings

The president or a vice president visits the site with the HSE Department: safety moment, HSE indicators and field inspection.
